REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: none of the prior art either alone or in combination disclose or teach of the claimed combination of limitations to warrant a rejection under 35 USC 102 or 103.

Specifically, with respect to independent claim 1, none of the prior art alone or in combination disclose or teach of a fast mechanical shutter for selectively intercepting and deflecting and permitting the passage of high-power radiant emissions as claimed, specifically comprising reflector position and actuator temperature sensing facilities and fault signal facility which responds to receipt of an error signal from the first and second sensing facilities.

Specifically, with respect to independent claim 8, none of the prior art alone or in combination disclose or teach of a fast mechanical shutter for selectively intercepting and deflecting and permitting the passage of high-power radiant emissions as claimed, specifically comprising reflector position and actuator temperature sensing facilities and fault signal facility which responds to receipt of an error signal from the first and second sensing facilities.

Specifically, with respect to independent claim 9, none of the prior art alone or in combination disclose or teach of an actuator for moving a mechanical shutter between first and second positions, which blocks and allows the passage of a beam of radiant energy respectively as claimed, specifically comprising a planar member reflector,

which is not coplanar or parallel with a plane of its rotation by an armature whose plane of rotation is generally normal to the path of the radiant energy, so that in its first position, the reflector intercepts the radiant energy beam and reflects the beam angularly away from the path.

Specifically, with respect to independent claim 22, none of the prior art alone or in combination disclose or teach of an actuator for moving a mechanical dielectric shutter between first and second positions, which blocks and allows the passage of a beam of radiant energy respectively as claimed, specifically comprising a planar member reflector, which is not coplanar or parallel with a plane of its rotation by an armature whose plane of rotation is generally normal to the path of the radiant energy, so that in its first position, the reflector intercepts the radiant energy beam and reflects the beam angularly away from the path.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
